

Financial

Comprehensive Financial Control Solutions designed for Project-Based Businesses and built directly on the Power Platform (not Dynamics extensions).

The Problem

It can be a struggle to manage some financial processes. Friction is caused by gaps between systems, old systems that are difficult or impossible to improve, systems that can't be geared the way you want or require specialists that are in short supply and cost a fortune. In some cases, there may be no formal system at all. As a result, processes are incomplete, compromised, offline or have labor intensive efforts to pull it all together. The data is hard to work with and you are not sure you trust it.

The Solution

Practical, flexible and robust solutions targeted at specific pain points. Apogos provides project-centric solutions for Forecasting, Budget Management, Customer Master Agreements, Revenue Contracts and Job Cost. These are built directly on the Power Platform, so you are already in the right place for analytics and AI. The open platform makes it easy to integrate and combine data from other systems. The solutions can be deployed granularly and focused on a single problem area. They are flexible and maintainable, so you don't have to compromise your process.

Why Apogos

- Belt and Suspenders Auditability
- Enhance and extend the life of ERP and other systems
- Deploy only what you need:
 - Master Agreements
 - Customer Billing
 - Job Cost
- Easy to get Started, Easy to Deploy, Easy to Maintain
- Works with other Apogos Modules
- Out of the Box Analytics

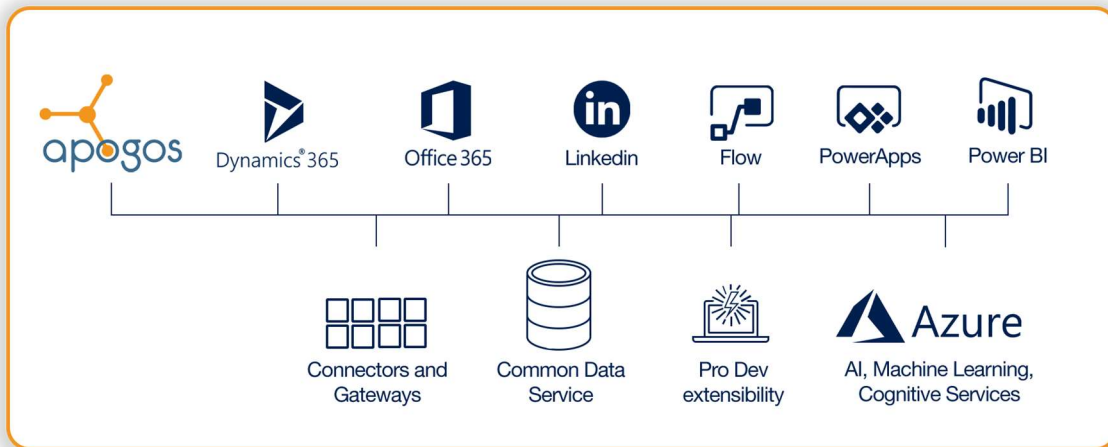

How Does it Work

Apogos is a **Solution** that is installed on Power Apps. Power Apps is part of Microsoft Office and their Power Platform. Microsoft provides the Platform and Apogos Provides the Business Logic. This approach is the most efficient, powerful and comprehensive way to automate your project delivery. It installs in minutes, is cost effective and future proof. Users simply use their current username and password and everything works with Outlook, Teams etc.,

The Bigger Picture

Apogos can be used out of the box, but it is designed for flexibility and extensibility. Customers optimize their project delivery by configuring the solution to their exact needs. It is Power Platform native and automatically works with Power BI, Power Automate and Power Platform based Dynamics products. It is part of Office 365 and fully integrated into Outlook, Teams etc.,

The data is in your tenant of Office 365. Leverage tools like Power BI, AI and Power Automate to gain insights and create automations without needing professional developers. Out of box data connections and tools consolidates your data. There is no limit to how far you can go.

How to Get Started

Find out quickly if Apogos is right for you. Free trials, quick installation and an Agile Proof of Concept will help you determine if Apogos is the right fit.

Our proof of concept approach is simple:
