Forecasting

Universal forecasting solution that combines the power of Microsoft data tools with an intuitive user experience that is flexible enough to serve most business needs.

The Problem

Forecasting should be simple but is a complicated hassle. The data you need for the big picture is stored in lots of different systems. The systems are specialized for specific tasks and don't talk to each other. None has the power and flexibility to pull it all together. Even if they are all wired up to analytics, it's still not enough. You still need to manage the forecasting process. The source data doesn't have everything you need. Managers must assign probabilities based on their experience and judgment. Values need to be spread over time for cashflow and revenue projections. Forecasting is specific to your business and because other systems don't do this well, it requires undue time and resources to manage.

The Solution

A standalone forecasting solution that is simple to use, but flexible enough to structure and streamline your forecasting process. That leverages powerful Microsoft data tools to get data from point solutions. A solution that makes it simple to enhance existing data by spreading units or money over time, assigning probabilities, what-if values and other meta data not in the other systems. That automatically snapshots data, stores it in human readable format in your Office 365 tenant. Now your business can deploy the true power of Analytics and AI.

Why Apogos

- Purpose-built to streamline forecasting
- Automations for data management
- Designed to leverage Microsoft data tools
- Limitless Extensibility
- Easy to get Started, Easy to Deploy, Easy to Maintain
- Works seamlessly with other Apogos Modules
- Out of the Box Analytics

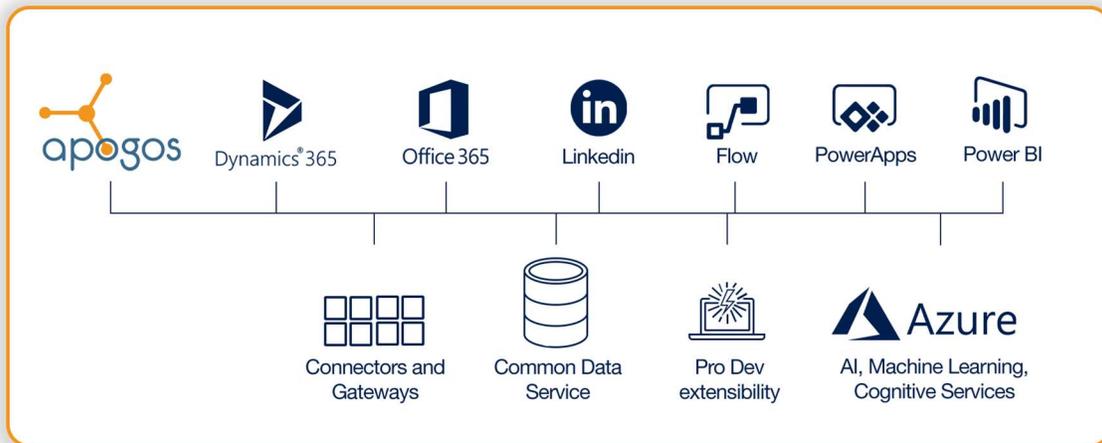

How Does it Work

Apogos is a **Solution** that is installed on Power Apps. Power Apps is part of Microsoft Office and their Power Platform. Microsoft provides the Platform and Apogos Provides the Business Logic. This approach is the most efficient, powerful and comprehensive way to automate your project delivery. It installs in minutes, is cost effective and future proof. Users simply use their current username and password and everything works with Outlook, Teams etc.,

The Bigger Picture

Apogos can be used out of the box, but it is designed for flexibility and extensibility. Customers optimize their project delivery by configuring the solution to their exact needs. It is Power Platform native and automatically works with Power BI, Power Automate and Power Platform based Dynamics products. It is part of Office 365 and fully integrated into Outlook, Teams etc.,

The data is in your tenant of Office 365. Leverage tools like Power BI, AI and Power Automate to gain insights and create automations without needing professional developers. Out of box data connections and tools consolidates your data. There is no limit to how far you can go.

How to Get Started

Find out quickly if Apogos is right for you. Free trials, quick installation and an Agile Proof of Concept will help you determine if Apogos is the right fit.

Our proof of concept approach is simple:
