apogos

Portfolio

Wholistic approach to managing your project supply chain. Capture project information as early as possible, manage the project evolution from approval to in progress and eventually completed and an asset placed in service.

The Problem

Project based businesses struggle to unify their data and processes. They have numerous systems, processes that span multiple applications, different departmental perspectives and involvement at different stages, competition over who owns it and what software should be used. And lots of gaps filled with spreadsheets, SharePoint and you name it. The result is fragmentation that makes it hard to see the whole picture and streamline your organization.

The Solution

Put in a framework that organizes and controls this fragmented constellation of systems. With the Apogos Portfolio framework you define your project delivery supply chain and it creates a unifying layer that consolidates the overall business process. As a result, it is much easier to correlate data between systems, much easier to use AI, much easier to improve processes. And it gives you the overall visibility you need to make data driven decisions. The Portfolio is the lynch pin to digitally transform your project-based business.

Why Apogos

- Quick Project Capture

- Templatized Project Setup

- Seamless integration to Office, Outlook & Teams

- Market Specific Solution Layers

  - Capital Planning

  - Pursuit Management

- Easy to add Apogos modules

  - Forecasting

  - Financial Management

  - Production Management
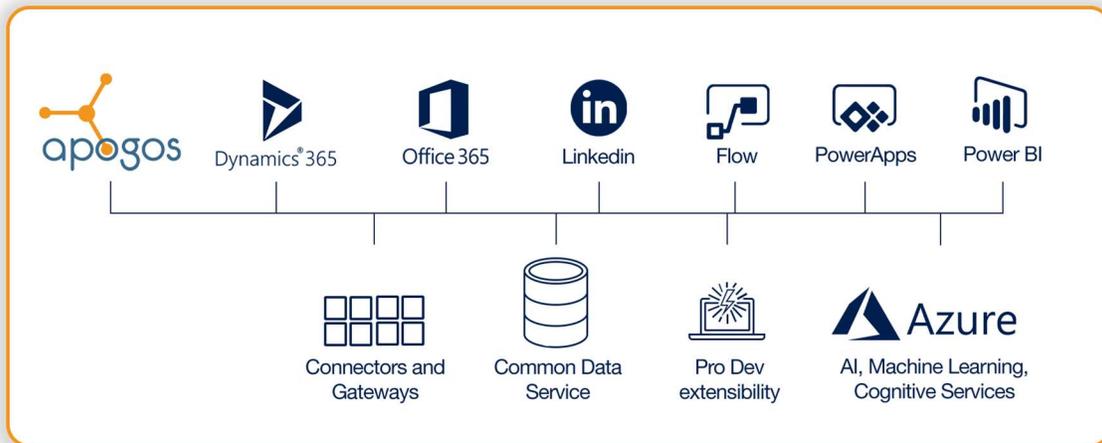

- Limitless Extensibility

- Out of the Box Analytics

How Does it Work

Apogos is a **Solution** that is installed on Power Apps. Power Apps is part of Microsoft Office and their Power Platform. Microsoft provides the Platform and Apogos Provides the Business Logic. This approach is the most efficient, powerful and comprehensive way to automate your project delivery. It installs in minutes, is cost effective and future proof. Users simply use their current username and password and everything works with Outlook, Teams etc.,

The Bigger Picture

Apogos can be used out of the box, but it is designed for flexibility and extensibility. Customers optimize their project delivery by configuring the solution to their exact needs. It is Power Platform native and automatically works with Power BI, Power Automate and Power Platform based Dynamics products. It is part of Office 365 and fully integrated into Outlook, Teams etc.,

The data is in your tenant of Office 365. Leverage tools like Power BI, AI and Power Automate to gain insights and create automations without needing professional developers. Out of box data connections and tools consolidates your data. There is no limit to how far you can go.

How to Get Started

Find out quickly if Apogos is right for you. Free trials, quick installation and an Agile Proof of Concept will help you determine if Apogos is the right fit.

Our proof of concept approach is simple:

Target
Pick a pain point, something that can be done in a reasonable amount of time and results in business value. This could be an application you are looking to replace, a process that should be automated or an area that needs better visibility.

⬇

Rough-In
A quick configuration of the Apogos Framework to resolve the pain point. We import your data and see your process in action in your Office 365 tenant.

⬇

Decide
With a minimum investment in time and money, you have hands on working software and will know if Apogos is the right partner for you.
