

Production

Automate management of work activities and optimize your project delivery.

## The Problem

Production management is critical to streamlining operations. The status and completion of tasks should automatically drive activities like invoicing, commissioning and quality control. While there are many task management and scheduling systems on the market, they are often limited, complicated, too expensive and worst of all siloed. As a result, information is inaccurate, slow to catch up and requires manual updates and reconciliation. This friction slows the flow of cash, makes it hard to react before it's too late to efficiently re-direct resources.

## The Solution

The Apogos Production Management solution provides core functionality and out of the box automations without being overly complex. Managing your production on a common data platform makes it easy to automate business processes end to end. The platform provides unlimited extensibility. Because the solution was designed to work intrinsically with MS Power Automate, it doesn't take special skills to configure and maintain your processes. And you can start small with out-of-the-box functionality and not worry about outgrowing the solution as your business matures.

### Why Apogos

- Workplan Templates and Automations
- Mobile Applications for Field Workers
- Limitless Extensibility
- Designed to Work with Power Automate
- Easy to get Started, Easy to Deploy, Easy to Maintain
- Works with other Apogos Modules
- Out of the Box Analytics

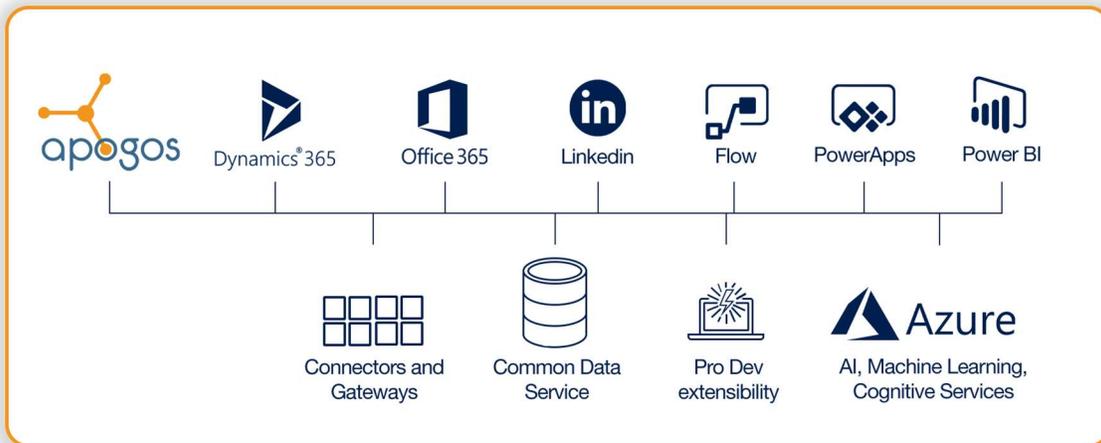

## How Does it Work

Apogos is a **Solution** that is installed on Power Apps. Power Apps is part of Microsoft Office and their Power Platform. Microsoft provides the Platform and Apogos Provides the Business Logic. This approach is the most efficient, powerful and comprehensive way to automate your project delivery. It installs in minutes, is cost effective and future proof. Users simply use their current username and password and everything works with Outlook, Teams etc.,

## The Bigger Picture

Apogos can be used out of the box, but it is designed for flexibility and extensibility. Customers optimize their project delivery by configuring the solution to their exact needs. It is Power Platform native and automatically works with Power BI, Power Automate and Power Platform based Dynamics products. It is part of Office 365 and fully integrated into Outlook, Teams etc.,

The data is in your tenant of Office 365. Leverage tools like Power BI, AI and Power Automate to gain insights and create automations without needing professional developers. Out of box data connections and tools consolidates your data. There is no limit to how far you can go.

# How to Get Started

Find out quickly if Apogos is right for you. Free trials, quick installation and an Agile Proof of Concept will help you determine if Apogos is the right fit.

Our proof of concept approach is simple:
